

FREQUENTLY ASKED QUESTIONS

How often should FORO be applied?

An average fuel location should apply FORO every 1-2 weeks. Application frequency will vary by site, based on traffic and fuel or oil accumulation. FORO should be applied regularly to continue to remove fuel and oil stains, harden damaged asphalt, and treat new drips. Target stains should be treated as necessary.

How much FORO should be applied per application?

Coverage area can vary depending on asphalt surface texture, with rougher surfaces requiring more product

On average, 1/4-cup will cover 20 SF, which is a little more than 1/3 of a parking space. Sealed asphalt areas will require less product. For best results, start with less product and apply additional product as needed.

What preparations are needed before applying FORO?

Clear away any debris and dispose of any trash. Asphalt should be dry before applying FORO, but it's OK to apply before asphalt becomes wet. Please follow all company and product safety procedures during use.

Do I have to block off the entire facility when applying FORO?

No - only section off the work area necessary to ensure personnel safety. After the application, the area is ready for use. You can treat one section at a time, while leaving other areas open for business.

How do I know when I am finished applying FORO?

Application is complete when the product has been evenly spread out and no excess product remains. If excess product remains, continue sweeping product until all product is dispersed.

The application is creating a lot of dust... Am I doing something wrong?

Using too much FORO during application may cause dust. Try applying the minimum amount of product required to treat a smaller area of asphalt surface. FORO should NOT be applied during extreme winds or gusty conditions.

Is it true that FORO should be applied to new locations before opening?

Yes. FORO has a high specific gravity that works to fill the pores of asphalt and establish a protective barrier that will start the cleaning process immediately and consume future oil stains.

Is FORO just cosmetic or does it really clean and harden asphalt?

Cleaning begins immediately after application and continues for up to 30 days. Microbes consume hydrocarbons, turning oil and fuel into harmless carbon dioxide and water. Microbes also work with other active ingredients to re-harden asphalt after it has been damaged by oils and fuels.

WARNING: Keep out of the reach of children.
